Recommended next steps

1. Build a dedicated page for each treatment question where you scored 0, with price ranges, injector credentials, FAQs and booking.
2. Strengthen the third-party sources AI engines cite: directory and "best of" listicles, Reddit threads, local press. Keep your name, address and phone consistent everywhere.
3. Publish clear pricing and named, credentialed providers. AI answers repeatedly quote per-unit prices and credentials.
4. Re-scan monthly to track your mention rate against the competitors above.

> Method: on Oct 14, 2026 we asked 10 buyer-intent patient questions per city, 3 times each, on two AI engines with live web search: ChatGPT-family (OpenAI gpt-4.1-mini with web search) and Perplexity (sonar). That's 60 answers per city. Business names were pulled from each answer and normalized. Mention rate = the share of answers that named the business. AI answers vary from run to run, so treat rates as estimates (±10–15 points at this sample size). Review figures are quoted from the cited directory pages.
